

## Cascade PE Split Collar Clamp/Coupling

The Cascade PE Coupling Clamp is ideal for repairs on PE mains; the fittings robust nature allows it to cover splits cracks and holes in the pipe with ease.

The fittings length also allows it to cover a larger area, the built in gripper rings in either end also allow this fitting to be used as a Coupling capable of operating at 16 Bar.

The fittings split collar properties allow it to be installed in narrow and tight working areas, and the bolts lock the fitting firmly in place.

The grip rings are specially designed to avoid pipes axial movement and breaking along the pipe.

- The Cascade PE Clamp/Coupling can be used to join pipes with a large gap due to the length of the fitting, particularly where Electro-fusion couplings have been cut out (As in above picture).

### Specifications

- Permanently repairs PE pipes quickly and safely.
- Can be used as both a Clamp and Coupling.
- For replacement of Electro-fusion couplings.
- PWP of 16 Bar
- Constructed of GGG-50 nodular Cast Iron for increased durability.
- 250 Micron Epoxy coating for anti corrosion.
- Gripper Rings constructed of Steel
- EPDM Seals.
